

ENERGY POLICY

At GPH Ispat Limited, we are committed to managing and improving our energy performance as a core part of our business strategy. Our Energy Policy supports sustainable steel production and aligns with national and global goals for energy efficiency and environmental responsibility.

We are committed to:

- Continuously improving energy performance across all operational areas, including steel melting, rolling, utilities, and power generation.

- Complying with applicable legal and regulatory requirements, including guidelines issued by SREDA, DOE, and BERC.

- Promoting energy awareness and responsibility among all employees through training and active participation.

- Communicating this policy to all persons working on behalf of the organization and making it available to relevant stakeholders.

- Integrating energy performance considerations into design, operation, and procurement activities.

- Ensuring the availability of information and resources necessary to achieve energy goals.

- Supporting the purchase of energy-efficient products, services, and technologies.

- Establishing and reviewing energy objectives, targets, and action plans at planned intervals.

This policy provides the framework objectives and is reviewed periodically for setting energy to ensure its continued suitability.
